# NET MIGRATION OF THE POPULATION, 1950-60

## Volume I.--States, Counties, Economic Areas, and Metropolitan Areas

Part 1.--Northeastern States

Part 2.--North Central States

Part 3.--South Atlantic States

Part 4.--East South Central States

Part 5.--West South Central States

Part 6.--Western States

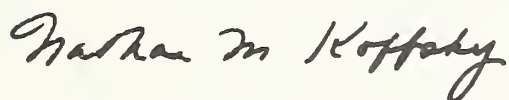

Additional volumes are planned which will include net migration estimates by age, sex, and color for regions, divisions, metropolitan and nonmetropolitan parts of States, economic subregions, and counties grouped by eligibility criteria of the Area Redevelopment Act, by percentage of the population urban or rural, and by median family income. An analysis of the net migration statistics and a full methodological statement will also be included.

## FOREWORD

Although the 1960 Census of Population recorded an increase of approximately 28 million in our total population during the 1950-60 decade, it also showed that in about half of the more than 3,000 counties in the United States there were population losses. Outmigration was the pervasive force in the population decline of the losing counties. The number of counties that have lost population because of an excess of deaths over births is still very small, and where that has occurred it is traceable to a long record of outmigration which has removed much of the population in the reproductive age group. Inmigration was an important, and, in many cases, the major component of change in about two-fifths of the counties which gained population. In the remaining gaining counties net migration losses were more than offset by natural increase.

Who are the people that have left one political, geographic, or economic area--a county, metropolitan area, State, or region--and gone to another? In what numbers and proportions did specific age groups, by sex, and by color, participate in the in- or outmigration which occurred differentially in various parts of the Nation in the decade of the fifties? What does the experience of that period portend for the pattern of population redistribution currently under way in the decade of the sixties?

Questions such as these are vital to the understanding of many economic and social problems and to the planning and implementation of area, regional development and redevelopment programs. But the answers to such questions could not be obtained without the detailed work embodied in the six-part publication of this Volume and the companion volumes of this cooperative effort by the Economic Research Service, the Oklahoma State University, and the Area Redevelopment Administration.

### Acknowledgments

The impetus for the development of net migration estimates by age, sex, and color for all counties in the United States came from discussions at a Research Workshop on Migration Statistics for the 1950-60 Decade held at North Carolina State College in April 1961. To implement the needs for migration data expressed at this Workshop, the Economic Research Service initiated this project under the general direction of Louis J. Ducoff, Chief, Farm Population Branch, in cooperation with the Department of Sociology of Oklahoma State University. In addition to the members of the staffs of the cooperating agencies, many others made contributions to the project. The Area Redevelopment Administration of the Department of Commerce provided a grant to support publication costs and advised on presentation format. The Population Division of the Bureau of the Census developed the census-survival ratios by age, sex, and color for the 1950-60 decade used in the migration computations, and advised on various technical matters. The National Vital Statistics Division of the Department of Health, Education, and Welfare provided published and unpublished data on births and deaths during the decade. Special acknowledgment is made to the Computing Center of the Oklahoma State University for furnishing unstintingly the time and talents of its staff and the use of equipment to carry out the voluminous computation work.

# NET MIGRATION OF THE POPULATION, 1950-60, BY AGE, SEX, AND COLOR

## Volume I.--States, Counties, Economic Areas, and Metropolitan Areas

### Introduction

This Volume presents net migration estimates by age and sex, and by color where appropriate, for States, counties, State Economic Areas, Standard Metropolitan Statistical Areas, and Standard Consolidated Areas.

These data supplement the intercensal estimates of total net migration for the 1950-60 decade, for all counties of the United States published by the Bureau of the Census in 1962. <sup>1/</sup>

This is the first time that intercensal net migration estimates for age-sex-color groups have been prepared for all counties in the United States. Lee and others <sup>2/</sup> published such net migration estimates, by States, for the decades 1870-1950, and Bogue <sup>3/</sup> published estimates for the 1940-50 decade for Standard Metropolitan Areas. Others have prepared estimates by age and sex, and sometimes by color, for counties within States or groups of States.

To obtain a fuller picture of the population shifts in the decade, it would be desirable to have information on the gross in-and-out movements of population which underlie the net migration estimates for counties. In the absence of such data, net migration estimates provide a broad picture of population redistribution which occurred in the 1950-60 decade. Net migration estimates are also useful for gauging the extent of population movement which may occur in the future and in making population projections for small areas.

### Note on Interpretation of the Net Migration Estimates

The net migration estimates represent the balance between the numbers of persons migrating into and out of a specified area. They show the net gain or loss of population due to internal migration, and reflect also net movement of civilian and military population between the United States proper and other areas, including Puerto Rico, outlying areas of U. S. sovereignty or jurisdiction, and foreign countries. Net immigration into the United States totaled about 2.6 million persons in the 1950-60 decade. Thus, there is a national difference between the sum of migration for areas with net immigration and the sum of migration for areas with net outmigration of approximately this magnitude. During the decade, outmigration counties had a net loss of 11.3 million persons while immigration counties had a net gain of about 13.9 million persons through migration.

### Brief Note on Methodology

Briefly, the method used to obtain the information is as follows:

Computation of net migration estimates for whites and nonwhites for each county.--White and

nonwhite population figures for each county, from the 1950 and 1960 Censuses of Population <sup>4/</sup>, and published and unpublished county data on births and deaths, by color, for the decade, from the National Vital Statistics Division <sup>5/</sup>, were used in developing first-stage net migration estimates for whites and nonwhites. These estimates were residuals obtained for each county by subtracting natural increase (births minus deaths) from the total change between 1950 and 1960 in resident population in each color group.

The first-stage county estimates for whites and nonwhites of each State were then adjusted to two sets of independent estimates of net migration--(a) the Bureau of the Census estimates of total migration for the counties <sup>1/</sup> and (b) the Bureau of the Census estimates of total net migration, by color, for the State. <sup>6/</sup>

Computation of county net migration estimates for age-sex-color groups.--Age-sex-color data for each county from the 1950 and 1960 Censuses of Population; county data on births, by color, during the April 1955-April 1960 and April 1950-April 1955 periods; and U. S. census-survival ratios, for native whites and native nonwhites, developed

by the Bureau of the Census 7/ were utilized in the computation of estimates of net migration for age-sex-color groups. Using the forward census-survival ratios method developed by C. Horace Hamilton 8/, estimates were made of the survivors to 1960 for each age-sex-color group of the 1950 population and of the persons born during the decade. Net migration estimates for age-sex-color groups for counties were residuals obtained by subtracting estimated survivors from appropriate groups in the 1960 resident population.

The county estimates for age-sex-color groups were then adjusted to the independent estimates of net migration, by color, referred to above.

Estimates for other areas.--Estimates for other areas were developed by summation of appropriate county net migration estimates.

Rates of net migration.--The net migration rates for age-sex-color groups, and for the totals of areas, are estimates expressed as a percentage of the 1960 survivors (after inclusion of adjustments made in the net migration estimates) of the 1950 population and births during the 1950-60 decade.

#### Detail of Net Migration Data

In Volume I, net migration estimates and rates are included for age-sex groups for every State, county, State Economic Area, Standard Metropolitan Statistical Area, and Standard Consolidated Area 9/ regardless of the size of the population in 1950. Similar data are included for the white and nonwhite populations for all States and for all other areas that had at least 5,000 nonwhites in 1950. In a very few instances, data are included for whites, although the 1950 white population was less than 5,000. Areas for which estimates and rates by age and sex only are given appear in separate tables from those showing data by color.

The 130 counties and independent cities of Virginia existing in 1960 were combined into 96 subdivisions of the State to obtain comparable geographic areas throughout the 1950-60 period; the entire State of Hawaii was treated as one area due to the absence of 1950 age-sex-color data for counties; and the 24 election districts of Alaska were combined into three areas corresponding to the State Economic Areas of Bogue and Beale. 10/

Data are included for 16 age groups in terms of age in 1960 (5-year age intervals, from 0-4 through 70-74, and 75 and over), and for the total population. In instances where the base population of an age group is small, net migration estimates and rates do not have a high degree of reliability. Caution should be used in regard to small estimates and small differences between estimates.

In the tables, the numbers of net migrants sometimes appear where rates are not shown. These are situations in which the rates are less than one-tenth of 1 percent.

A minus sign preceding or following the estimates denotes outmigration.

#### Definitions of Areas

Standard Metropolitan Statistical Areas (SMSA's) consist of a single county or a group of contiguous counties which contain a central city of 50,000 or more inhabitants, or two or more contiguous cities with a combined population of at least 50,000, the smaller of which had at least 15,000 population, and adjacent counties which are essentially metropolitan in character and economically and socially integrated with the central city. Standard Consolidated Areas (SCA's) consist of several contiguous SMSA's and additional counties which are closely integrated. State Economic Areas (SEA's) are relatively homogeneous subdivisions of States consisting of a single county or group of counties which have similar economic and social characteristics.

#### Codes Following County Names

In tables 2 and 2a, the first two items in the parentheses below the name of each county (or county equivalent) refer to the State Economic Area and the Subregion, respectively, in which the county is included. The third item is a code indicating the eligibility status of the county as of February 1963 for Federal assistance under the Area Redevelopment Act. 11/ (Code 1--5a areas--large labor market areas in which nontemporary unemployment was at least 6 percent. Code 2--5b areas--predominantly rural counties of low total or farm income, small labor market areas characterized by substantial unemployment, and certain counties with Indian reservations. Code 0--non-eligible counties.)

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

# INDIANA

<u>Table</u>	<u>Page</u>
1 Net migration by age, color, and sex, 1950-60: Indiana .....	133
2 Counties with less than 5,000 nonwhite population in 1950, by age and sex .....	134
2a Counties with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	148
3 State Economic Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	151
3a State Economic Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	153
4 Standard Metro Statistical Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	-
4a Standard Metro Statistical Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	154

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas. Data for the Chicago-Northwestern Indiana SCA are located in table 5 for Illinois State.

State Economic Area and Standard Metropolitan Statistical Area	County		State Economic Area		Standard Metro- politan Statis- tical Area

# ILLINOIS

<u>Table</u>	<u>Page</u>
1 Net migration by age, color, and sex, 1950-60: Illinois .....	157
2 Counties with less than 5,000 nonwhite population in 1950, by age and sex .....	158
2a Counties with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	174
3 State Economic Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	178
3a State Economic Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	179
5 Chicago - Northwestern Indiana Standard Consolidated Area by age, color, and sex .....	182

State Economic Areas (SEA's), Standard Metropolitan Statistical Areas (SMSA's), and Standard Consolidated Areas (SCA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas. Data for the Chicago-Northwestern Indiana SCA are located in table 5 for Illinois State.

State Economic Area and Standard Metropolitan Statistical Area	County	State Economic Area		
		Table 2	Table 3	Table 3a
Metropolitan and Nonmetropolitan State Economic Areas

# MICHIGAN

<u>Table</u>		<u>Page</u>
1	Net migration by age, color, and sex, 1950-60: Michigan .....	185
2	Counties with less than 5,000 nonwhite population in 1950, by age and sex .....	186
2a	Counties with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	198
3	State Economic Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	203
3a	State Economic Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	205

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

State Economic Area and Standard Metropolitan Statistical Area	County		State Economic Area	
	Table 2	Table 2a	Table 3	Table 3a

4a	Standard Metro Statistical Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	224

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

State Economic Area and Standard Metropolitan Statistical Area	County		State Economic Area	Standard Metropolitan Statistical Area

4a	Standard Metro Statistical Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	-

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

4 Standard Metro Statistical Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	268
4a Standard Metro Statistical Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	-

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; non-metropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

State Economic Area and Standard Metropolitan Statistical Area	County		State Economic Area	Standard Metro- politan Statis- tical Area

# MISSOURI

<u>Table</u>		<u>Page</u>
1	Net migration by age, color, and sex, 1950-60: Missouri .....	271
2	Counties with less than 5,000 nonwhite population in 1950, by age and sex .....	272
2a	Counties with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	290
3	State Economic Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	293
3a	State Economic Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	294
4	Standard Metro Statistical Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	-
4a	Standard Metro Statistical Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	297

Total net migration estimates for St. Francois County and SEA 08, and total net migration estimates, by color, for the State differ from those published by the Bureau of the Census because of subsequent revisions of 1957 births for St. Francois County by the National Vital Statistics Division of the Public Health Service.

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

State Economic Area and Standard Metropolitan Statistical Area	County	State Economic Area			Standard Metropolitan Statistical Area

# NORTH DAKOTA

<u>Table</u>	<u>Page</u>
1 Net migration by age, color, and sex, 1950-60: North Dakota ..	301
2 Counties with less than 5,000 nonwhite population in 1950, by age and sex .....	302
2a Counties with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	-
3 State Economic Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	311
3a State Economic Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	312
4 Standard Metro Statistical Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	312
4a Standard Metro Statistical Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	-

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

State Economic Area and Standard Metropolitan Statistical Area	State Economic Area		Standard Metropolitan Statistical Area
	Table 3	Table 3a	Table 4
Nonmetropolitan State Economic Areas

2a Counties with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	-
3 State Economic Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	327
3a State Economic Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	328

# State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's).

Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. Each SMSA which had a total population of 100,00 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

State Economic Area and Standard Metropolitan Statistical Area	County	State Economic Area		
		Table 2	Table 3	Table 3a
Nonmetropolitan State Economic Areas				
1. Black Hills and West-River Range				X
2. North Central South Dakota			X	
3. South Central South Dakota			X	
4. Northeast South Dakota			X	
5. Southeast South Dakota			X	
Standard Metropolitan Statistical Areas				
Sioux Falls	Minnehaha

4a Standard Metro Statistical Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	350

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

# KANSAS

<u>Table</u>	<u>Page</u>
1 Net migration by age, color, and sex, 1950-60: Kansas .....	353
2 Counties with less than 5,000 nonwhite population in 1950, by age and sex .....	354
2a Counties with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	371
3 State Economic Areas with less than 5,000 nonwhite population in 1950, by age and sex .....	372
3a State Economic Areas with 5,000 or more nonwhite population in 1950, by age, color, and sex .....	373

State Economic Areas (SEA's) and Standard Metropolitan Statistical Areas (SMSA's). Data for an area appear only once in the tables. Thus, data for single-county SEA's and SMSA's appear only in the county tables, and data for multiple-county SMSA's that consist of a single SEA appear only in the SEA tables. If a SMSA is located in two or more States, the table for that area is included in the State in which the only central city, or the largest central city, is located. Each SMSA which had a total population of 100,000 or more in 1960 and a central city of 50,000 or more is classified as a separate metropolitan SEA. Metropolitan SEA's are identified by alphabetic codes; nonmetropolitan SEA's are identified by numeric codes.

The key below shows the table in which to locate data for specified areas.

State Economic Area and Standard Metropolitan Statistical Area	County Table 2a	State Economic Area	
		Table 3	Table 3a
Metropolitan and Nonmetropolitan State Economic Areas			
1. Southwest Kansas		X	
2. West Central Kansas		X	
3. Central Kansas		X	
4. North Central Kansas		X	
5. Kansas Flint Hills		X	
6. Central Missouri Valley-Kansas Part			X
7. East Central Kansas		X	
8. Southeast Kansas			X
A. Wichita SMSA	Sedgwick		
B. Kansas City SMSA (Kansas part)			X
C. Topeka SMSA	Shawnee
